and

CLAIMS

A magnetic tape cartridge comprising:
 a single reel with magnetic tape wound thereon;
 a cartridge case in which said reel is rotatably housed;

reel-rotation restraining means which allows rotation of said reel during use and restricts said rotation during periods of nonuse;

wherein said reel-rotation restraining means has a reel locking member, which is movable toward and away from said reel, for restricting rotation of said reel, an urging member for urging said reel locking member in a restraining direction, and

an releasing member, which is rotatable integrally with said reel, for moving said reel locking member in an unlocking direction by moving according to a chucking operation of rotation means provided in a drive unit;

and wherein said releasing member has

a generally triangular plate portion, and
three leg portions, provided on vertexes of said
triangular plate portion, and having a lower end which is inserted
into a through hole provided in said reel and abuts part of the
rotation means of said drive unit;

and wherein said releasing member is sized so that with part of said releasing member inserted into a center opening of said reel, and two of said three leg portions positioned near

25

5

said through holes, the remaining one leg portion is dropped and inserted within the center opening of said reel.

- 2. The magnetic tape cartridge as defined in claim 1, wherein the triangular plate portion of said releasing member has a holding portion so that it can be positioned and held by an assembling tool.
- 3. The magnetic tape cartridge as defined in claim 2, wherein said holding portion is constructed of a bore penetrating the plate portion of said releasing member, said bore being formed obliquely toward a sliding portion of said releasing member that contacts said retraining member.
- The magnetic tape cartridge as defined in claim
 further comprising:

leader tape firmly attached at one end thereof to a leading end of said magnetic tape;

a leader member, firmly attached to the other end of said leader tape, for pulling out said magnetic tape to a magnetic recording-reproducing unit; and

reinforcement tape stuck near an end of said leader tape to which said leader member is firmly attached;

wherein at least one side of said leader tape has a center-line average surface roughness (Ra) of 4 nm or greater.

5. The magnetic tape cartridge as defined in claim 4, wherein said leader tape has a base material having a lengthwise elastic modulus of 630 kg/mm 2 or less and a widthwise elastic modulus of 580 kg/mm 2 or less, preferably a lengthwise elastic

5

modulus of 550 kg/mm 2 or less and a widthwise elastic modulus of 550 kg/mm 2 or less.

- 6. The magnetic tape cartridge as defined in claim 4, wherein the base material of said leader tape is formed from polyethylene terephthalate (PET) film or polyimide (PI) film.
- 7. The magnetic tape cartridge as defined in claim 4, wherein a thickness of said leader tape is less than or equal to five times a thickness of said magnetic tape, preferably less than or equal to three times, and further preferably less than or equal to two times.
- 8. The magnetic tape cartridge as defined in claim 4, wherein said leader tape has a length greater than or equal to the sum total of a length of a tape running path leading from an opening formed in said cartridge case to a machine reel in said magnetic recording-reproducing unit, and a length of said leader tape wound at least three times the reel hub circumference on said machine reel.
 - 9. A magnetic tape cartridge comprising:

a cartridge case in which a single reel with magnetic tape wound thereon is rotatably housed; and

leader tape joined to a leading end of said magnetic tape so that it is pulled out to a magnetic recording-reproducing . unit, along with said magnetic tape;

wherein at least one surface of said leader tape is provided with a magnetic layer having a specific surface resistance of 1 \times 10 $^{13}\Omega/2.54$ cm or less.

36

10. A magnetic tape cartridge comprising:

a cartridge case in which a single reel with magnetic tape wound thereon is rotatably housed; and

leader tape joined to a leading end of said magnetic tape so that it is pulled out to a magnetic recording-reproducing unit, along with said magnetic tape;

wherein said leader tape is constructed of sheet form metal tape having a specific surface resistance of 1 \times 10¹³ $\Omega/2.54 \text{cm}^2$ or less.

11. A magnetic tape cartridge comprising:

a cartridge case in which a single reel with magnetic tape wound thereon is rotatably housed;

leader tape firmly attached at one end thereof to a leading end of said magnetic tape; and

a leader member, firmly attached to the other end of said leader tape, for pulled out said magnetic tape to a magnetic recording-reproducing unit.
